Collin Burleigh

SOFTWARE ENGINEER | PYTHON BACKEND

New Hampshire, USA | 603-617-9989 | collin.s.burleigh@gmail.com
collinburleigh.com | linkedin.com/in/burleighcollin | github.com/CBurl1

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL
Backend & data: FastAPI, Flask, PostgreSQL, Supabase, REST APIs, pytest
Frontend & desktop: Next.js, React, Electron, Tailwind CSS, HTML/CSS
Cloud & integrations: AWS, Vercel, Magento 2 API, Veeqo API, Auth0, Stripe, OpenAI API, Git

ENGINEERING EXPERIENCE

Independent Software Developer | Jun 2023 - Present

AutoSortPro (2024 - 2026) | Python, FastAPI, Electron, React, PostgreSQL
- Built FastAPI and PostgreSQL-backed file workflows with validation, OCR, searchable metadata, and export; integrated Auth0, Stripe, OpenAI, and AWS.
- Investigated user issues through logs, API responses, and database checks. During its operation, AutoSortPro served 132 active users who organized 12.5K+ files.

M2 InstaCount | Python, Flask, React, PostgreSQL | Product development and SEO
- Maintain and extend M2 InstaCount for Historia Emporium; manage Google Search Console.

Sentinel Insulation | Next.js, React, TypeScript, Tailwind, Supabase | WordPress
- Built a custom quote tool and expanded it into a mobile-friendly ERP on Vercel with Supabase PostgreSQL, Auth, and Storage.
- Enforced assigned-job and office-only financial access with Supabase Row Level Security (RLS) and server-side checks; direct links cannot bypass document permissions.
- Added shared scheduling, installer job updates/photos and material usage/returns, three-supplier price comparison and PDF orders, plus invoices, payments, commissions, and estimated-vs-actual profit calculations.
- Rebuilt the WordPress site and continue to manage its SEO.

Spencer Burleigh | Jekyll, JavaScript | One-year engagement
- Redesigned the Jekyll frontend, fixed image and path bugs, and built an S3-backed photo feed with a bucket policy.

Software Developer & Ecommerce Operations | Historia Emporium | 2023 - Aug 2026

Python, Flask, React, PostgreSQL | Earlier order fulfillment, 2022 - 2023
- Moved from order fulfillment into software development after Flatiron School in 2023; built M2 InstaCount for barcode counts, receiving, and discrepancy review. One 4,500-SKU year-end count took 22 hours, down from 42.
- Built browser-based picking for an Android scanner phone with Magento and Veeqo APIs; four timed picks averaged 22% less time than the prior Veeqo workflow.
- Diagnosed thousands of missing Veeqo images as stale Magento cache links and removed broken references with the Veeqo API.
- Built Python and Beautiful Soup scrapers for brand and consignment images, plus an eBay sold-listing price script matching name, brand, GTIN, and MPN.
- Contributed to a listing pipeline using OpenCV for cropping and color correction and OpenAI API to prefill item data.
- Trained a teammate in Cursor and secure API key handling; advised on project scope and system design.

Application Developer, Contract | OpenHome | Jan 2024 - Apr 2024

Python, OpenAI API | Voice OS prototype
- Built a therapist-style conversational app that summarized stored JSON chats for longer-term context.

EDUCATION

Flatiron School | Software Engineering Bootcamp, 2023

ADDITIONAL EXPERIENCE

US Foods | Order Selector | Aug 2026 - Present
