PROFILE

Software engineer focused on Python backend development for file-management and ecommerce applications. Built AutoSortPro with FastAPI and M2 InstaCount with Flask, using PostgreSQL and React across both. Improves products after release through debugging and user feedback.

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL
Backend & data	FastAPI, Flask, PostgreSQL, SQLite, REST APIs, pytest
Frontend & desktop	React, Electron, HTML/CSS, Tailwind, Jest
Integrations & tools	Magento 2 API, Veeqo API, Auth0, Stripe, OpenAI, AWS, Git, Postman, Jira

ENGINEERING EXPERIENCE

Freelance Software Developer | Jun 2023 - Present
AutoSortPro | Python, FastAPI, Electron, React, PostgreSQL
- Built FastAPI and PostgreSQL-backed workflows that process images and documents into editable titles, summaries, tags, and searchable metadata.
- Implemented file validation, batch processing, OCR, and export of original files with metadata.
- Integrated Auth0, Stripe, OpenAI, and AWS into account, billing, and file-processing workflows.
- Investigated user-reported issues using logs, API responses, and database checks; shipped fixes. AutoSortPro reached 132 active users and organized 12.5K+ files.

Technical Systems Engineer, Ecommerce Operations | 2022 - Present
M2 InstaCount | Python, Flask, React, PostgreSQL, Magento 2 and Veeqo APIs
- Built Flask and PostgreSQL-backed barcode lookup, discrepancy review, receiving with CSV export, and Veeqo-linked mobile batch picking.
- A roughly 4,500-SKU year-end count at one store took 22 hours with the new workflow, down from 42 hours with the prior process.
- Supported Magento inventory and catalog workflows for a business processing 75+ daily orders; investigated SKU and quantity discrepancies.

Application Developer, Contract | OpenHome | Jan 2024 - Apr 2024
Python | Grant-funded prototype
- Developed a Python application for an AI-powered smart-home OS prototype presented to 100+ potential investors.

EDUCATION

Flatiron School | Software Engineering, 2023
